For 110V applications we recommend the LX7-A model instead of adapting an LX7-1 / LX7-2. ## in the part number varies by revision.

LX7-A

recommended for 110V applications

POG cable

[WEL-RM037](#)

The LX7-A is the factory 110V-ready model in the LX7 family — the right choice for new 110V and POG installations.

How to choose

1. Match your machine's power type: 12V DC harness, 110V AC wall power, or POG (Pot O' Gold) board on 110V.
2. Check the model on the validator's side label, then order the matching cable shown above.
3. Gold part numbers are clickable — they open the product page on [billacceptors.us](#) so you can order online.
4. Not sure? Call or WhatsApp us with the model and serial from the label — we will identify the right cable.
